

# DaVinci Turret Package

The turret is perhaps the most challenging of all roofing structures because it is a cone. Typically it takes many years of experience to master the turret. In the past it was necessary to manually trim or shape each tile and then carefully fit them on the tapering surface. Up until now this has been a painstaking, time consuming method that is, in many cases, trial and error.

DaVinci Roofscapes has simplified this excruciating labor intensive process and made it possible for a professional roofer to quickly install a great looking custom engineered roof on virtually any turret.

You provide us with 4 dimensions for the turret and DaVinci Roofscapes will create a custom engineered Turret Package just for you. All we need is the distance from the peak of the turret to the edge of the drip cap, the turret pitch, turret cap length and coursing exposure and DaVinci will figure out the rest and deliver it to you ready to install. Your turret package will include starter tiles, numbered field bundles that are custom engineered for each course and a Turret Map Diagram.

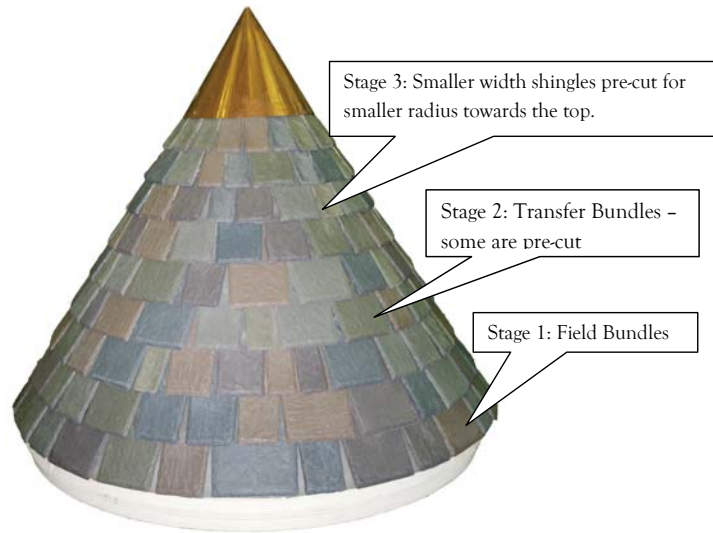

The DaVinci Turret Package is designed so that any professional roofer – even one who has no previous experience with turrets – can cost effectively install a great looking high quality roof on any Turret.

Contact your local DaVinci Roofscapes Sales Representative to find out more.

## DaVinci Turret Package includes:

- DaVinci Roofscapes' formulation of all coursing rows, pre-cut tiles and labeling each row according to the dimensions given
- All color and random size collation~sent out in bundles according to the row that the tiles correspond to on the turret (Note: Small tiles for the top rows will be color collated: exact placement will have to be field selected. DaVinci will always supply more pieces than required for each row number which will allow for normal random size selection as the tiles are applied).
- All DaVinci Turret Packages are palletized and labeled respectively.
- A Turret pallet will include the pre-ordered starter tiles and all coverage of Stages I, II & III for each specific turret.

Bundles are delivered custom shaped and numbered by row.

Install by row.

Complete.
