

DaVinci Roofscapes does not require any maintenance to the DaVinci tiles to maintain warranty coverage. If cleaning the tiles is desirable for aesthetic reasons there are several acceptable methods.

1. For small areas a wet rag by itself or a wet rag with dishwashing soap works well. Stronger cleaners may also be used but you should try them in a spot that is unseen first. Some cleaners will change the gloss level of the tiles. Don't use any abrasive instruments. A wire brush will scratch the tiles.
2. For large sections power washing works very well. You may use up to a 3500 psi power washer with a 25 degree head positioned 12 "or more above the tiles as long as the wand is moving. Always make sure that stream of water is facing in a downhill direction and not an uphill direction so the water doesn't get under the roof covering.
